DTI Atlas Building – Santa Fe

• Casey Goodlett, Guido Gerig

Sep 27, 2007 Slide 1 gcasey@sci.utah.edu

Overview

- Algorithm [1]
- Inputs
- Geometry of atlas fibers
- Diffusion statistics
- Results, conclusions, and thoughts

Inputs

- Larger data set
- Image data
 - Scanner resolution
 - No distortion correction

Preprocessing

- Tensor estimation DTIProcess from NeuroLib
 - Weighted least squares (3 iterations)
 - Background threshold 350
 - Time: 3-4 minutes per
- FA/MD/Color FA computation using DTIProcess
- Maximum eigenvalue image (sigma = 4.5 mm)
- ~minutes per-image, Xeon dual-core w/ 2GB (Memory is limiting factor for processing)

Registration

- Average baseline image registered to T2 atlas
 - RView
 - Cross-Correlation
 - 3 resolution levels
- Affine registration used as initalization for fluid registration (Joshi, Davis) [2]
 - Multi-resolution (3 levels)
 - Runs in ~15 minutes on 8 core machine 64 GB RAM

Fiber Tracking

- Computed on atlas tensor image
- ROIs redrawn in atlas based on sample ROIs
 - InsightSNAP 1.5.4 with FA and/or Color FA images
 - Arcuate drawn based on Susumu Mori's atlas
- FiberTracking 2.3.1 used with default parameters

Collection of Diffusion Statistics

- FiberViewer 1.2.3 used for clustering/analysis
- Fiber process command line tool in DTIProcess
- For each point in atlas bundle lookup data from individual image
- For each bundle project collected data onto 1-d curve via arc-length parameterization. Median of data in crosssection
 - FA
 - MD

Analysis of Tract Statistics

- FiberViewer used to reduce each individual fiber bundle to 1-d function (median statistic)
- Population (N images) collected into spreadsheet NxM (m == # of samples along tract)
- Analysis done using scipy, numpy
- Functional Data Analysis [3]
 - Smoothing
 - PCA
 - point-wise tests (multiple comparison correction)

Results

- Lateralization in Internal Capsule, Cingulum,
 - Possibly due to atlas procedure especially in cingulum
 - Possibly in original data especially in internal capsule
- No statistically significant diffusion differences
- We want to compare the atlas results with individual manual processing
